(54) Title: A COMMUNICATION APPARATUS HAVING FOLDABLE AND TURNABLE HOUSING MEMBERS

(57) Abstract: A communication apparatus has a first housing member (100) and a second housing member (200), which are mechanically interconnected so that said first housing member is foldable as well as turnable with respect to said second housing member so as to assume different operating positions. The communication apparatus has a user interface (334) including a display (110) and manual input means (120, 220), and a processing device (300) for providing services (340-346) to a user through said user interface, wherein said display is located in said first housing member. The manual input means comprises a first set of keys (120) comprised in said first housing member (100), and a second set of keys (220) comprised in said second housing member (200), wherein a plurality of said services (340-346) are controllable by said user through said first set of keys.
